

Unisoft automizes Duifhuizen Lederwaren

Duifhuizen started in 1953 with crafting handmade leather wallets. Meanwhile Duifhuizen Lederwaren has more than 20 stores with an extensive collection from first class travel baggage until the last trendy bags. Duifhuizen Lederwaren B.V. recently decided to change to the store automation from Unisoft.

More efficient management because of store solution Unisoft

Jan Vos, responsible for the store automation at Duifhuizen Lederwaren tells enthusiastic: "We are going to work with the management information, Point-of-Sale and Back office software from Unisoft. With the new store solution from Unisoft we expect to get more organization insight and let our store processes run more efficiently. The touch screen Point-of-Sale is very user-friendly. Because of this it's possible to settle up rapidly and efficiently. Moreover photos can be added with articles in the Point-of-Sale software and it's possible to send a email directly from the Point-of-Sale. Further is it possible to use an online central functionality of functions like customer processing, stock information and inventory directly from the Point-of-Sale. Changes in stock- and customer data processes directly as a result of which we always have actual information."

Jan Vos continues: "The merchandise solution overcomes all our primary company processes, like planning, purchase, goods reception and stock management. We can make sure that the right product is on the right place

on the right time by for example exchanging articles between different stores. Moreover we have insight in the stock of each store, fraud, granted discounts etc. With the management information we have insight our organisation so that we can adjust promptly on sales- and merchandise level. We are able to make a weekly report with the sales results, merchandise transaction, margin, average price, average pieces on a voucher etc. weekly and cumulative compare with last year. At last the integration between Unisoft and Finall offers us a very complete and functional information system. Because of the integration with Finall we have the insight in as well as the cashand supply of goods stream. Moreover data from the systems can be used mixed up without problems. Because of this we avoid double work and that saves us some time. We are particular positive about the software possibilities and we intend to grow with the innovative solutions from Unisoft."
